

Problem Statement: Advisors are busy on a daily basis maintaining context of students' requests, meeting with students, responding to students' emails on time, etc. Vizor helps to solve this problem by providing students with a chatbot that accomplishes the following:

Chatbot Functionality (for students)

- chat assistant icon should appear in the bottom right of any ASU domain website
- 'x' button → close the chatbot and represent it as a non-distracting circle icon, allowing the user to continue reading the website
- '-' → minimizes the chatbot as a label in the bottom right of the website that the user can maximize again
- Drafting emails and tickets (if Chatbot can't resolve the student's concern), maintaining context to store as a student's specific ticket, so that the next time they log in, the AI assistant has context of their tickets
- Chat session history that turns into a report ticket on our 'advizor' web application

Extension Outline

- Chat page:
 - Similar to the interface in the image below
 - Change the logo to make it look more unique for the AI assistant

Website outline

- Landing page about the Vizor assistant
- Login portal for students and advisors
- Advisor page
 - Session histories
 - Request Tickets
 - Annotated reports

Extra Features

- Voice assistant
- FAQs resolved through access to students' DARS → higher productivity for advisors
- Implemented a soft 'resolve' for students, and a hard resolve for advisors to close tickets
- Visual flowchart gamified checkpoints for major map routes that students can take.
